

CCEWOOL® Rock Wool Board

Description:

CCEWOOL rock wool boards feature a certain of strength, excellent thermal stability and chemical stability, outstanding sound absorption, heat preservation and other properties. Its fireproofing performance conforms to A1 grade. Water repellent type and low chlorine type of products can be manufactured according to the requirement of customers. Aluminum foil, fiberglass cloth, and other veneer materials can also be overlaid to the surface of products.

Technical data and Size:

CCEWOOL® Rock Wool Board			
Density	60kg/m3 (GB/T 5480.3)	80kg/m3 (GB/T 5480.3)	100kg/m3 (GB/T 5480.3)
Thickness	30-150mm (GB/T 5480.3)		
Size	1200X600mm (GB/T 5480.3)		
Thermal Conductivity	The values are calculated as the average temperature and are in compliance with the relevant test regulations. GB/T 10294, GB/T 10296, ASTM C177)		
70°C	0.041W/(m.K)	0.041W/ (m.K)	0.039W/ (m.K)
100°C	0.047W/(m.K)	0.047W/ (m.K)	0.043W/ (m.K)
150°C	0.057W/(m.K)	0.056W/ (m.K)	0.050W/ (m.K)
200°C	0.066W/(m.K)	0.065W/ (m.K)	0.058W/ (m.K)
250°C	0.078W/(m.K)	0.077W/ (m.K)	0.066W/ (m.K)

300℃	—	0.082W/ (m.K)	0.074W/ (m.K)
350℃	—	—	0.083W/ (m.K)
400℃	—	—	0.093W/ (m.K)
Maximum temperature in use	450℃ (GB/T 17430, GB50264)	550℃ (GB/T 17430, GB50264)	750℃ (GB/T 17430, GB50264)
Recommended temperature in use	350℃ (ASTM C411-05, ASTM C447-03, GB50264)	450℃ (ASTM C411-05, ASTM C447-03, GB50264)	650℃ (ASTM C411-05, ASTM C447-03, GB50264)
Flame spread indicator	0 (ASTM E84-10)		
Flue gas development index	≤25 (ASTM E84-10)		
Combustion performance	A1 级 (GB 8624, EN13501-1, BS 476 Part4)		
Mass hydroscopicity	≤1% (ASTM C1104/1104M)		
Volumetric hydroscopicity	≤1% (ASTM C1104/1104M)		
Chloride ion content	≤10ppm (GB/T 17393, ASTM C871-08)		
Water repellency rate	99.5% (GB/T 10299)		
Fiber diameter	≤6μm (GB/T 5480)		

Raw Materials

Selection of high-quality natural rock made of basalt.

Select high-quality ores with advanced mining equipment to avoid the entry of impurities and ensure the sustainability of rock wool.

Production Process

Completely melt the raw materials under 1500°C.

Melt the raw materials at a high temperature of about 1500°C in the cupola and reduce the content of slag balls to keep the low thermal conductivity at high temperatures.

Using four-roller high speed spinner to produce fibers, greatly reduced shot content.

The fibers formed by a four-roll centrifuge at a high speed have the softening point of 900-1000°C. The special formula and mature production technology greatly reduce the content of slag balls, leading to no change in long-term use at 650°C and the enhancement of resistance to high temperatures.

Quality Control

Each shipment has a dedicated quality inspector, and a test report is provided prior to the departure of products from the factory to ensure the export quality of each shipment of CCEWOOL.

A third-party inspection (such as SGS, BV, etc.) is accepted.

Production is strictly in accordance with ISO9000 quality management system certification.

Products are weighed before packaging to ensure that the actual weight of a single roll is greater than the theoretical weight.

The products are packaged with puncture-resistance shrinkable film by an automatic shrink-packaging machine, suitable for long-distance transportation.

Application Performance

1. More fireproof: Class A1 fireproof insulation material, long-lasting working temperature up to 650°C
2. More environmental: neutral PH value, can be used for planting vegetables and flowers, no corrosion to heat preservation medium, and more environmental
3. No water absorption: water repellency rate as high as 99%
4. High strength: pure basalt rock wool boards with greater strengths
5. No delamination: The cotton yarn adopts a folding process and has better drawing results in experiments.
6. Various sizes with the thickness range from 30-120mm can be produced according to customers' requirements.
